

# Part Box Program for Pump Parts Replacement

## Plan for the Unexpected

More than just a pump supplier, Sulzer works together with you to assure you have all the necessary support, whenever needed.

By releasing its "Part Box Program", Sulzer helps you manage and organize different pump parts to make sure the required items are available in case of break-down.

Be it a shim or a gasket, Sulzer's parts box has been customized with components critical for your pump.

## Tailored to Your Needs

The Sulzer parts box packages include:

- Storage of components in a weight tested and certified box, specifically designed for your equipment
- High quality inspected components
- A combination of your current inventory and the balance of components supplied by Sulzer
- Component location templates

## Options and Benefits Brought by Sulzer

- Standard boxes or nitrogen purged pods
- A cross-section drawing of your pump
- Drawing documentation allowing crosschecking the "Fit, Form and Finish" of all the provided components
- Full traceability of all materials with foundry certifications, heat-treatment and balance reports
- Dedicated reverse engineering group outfitted with the latest technology to assure your asset never becomes obsolete
- Decades of experience for manufacturing of third-party components
- Material upgrades and fast deliveries
- In-house foundry

- Sulzer Metco coatings to increase reliability and efficiency of your pump components
- Complete removal and installation of your rotating equipment
- Storage of your asset at your location or in one of our many service center facilities.
